

static $\rho(x)$ wound-like perturbations

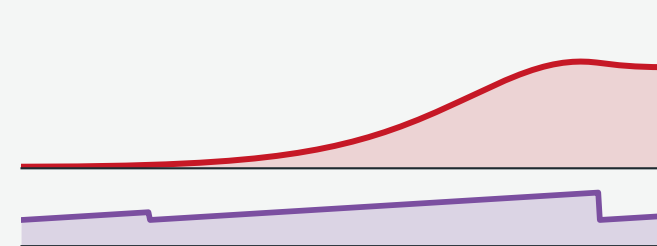

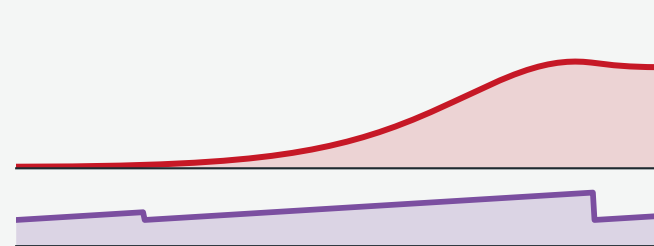

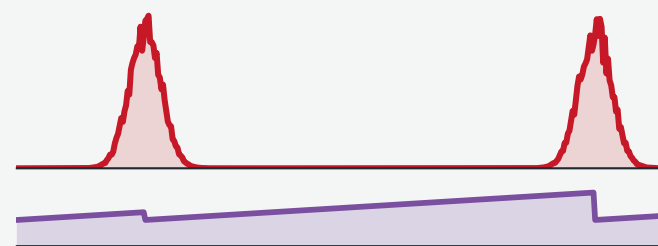

fixed source density

$t = 100$: **selected pattern**

$t = 1000$: **retained pattern**

selection

pinned

dynamic $\rho(t)$ initial condition

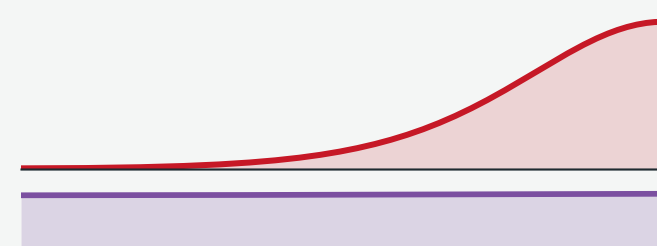

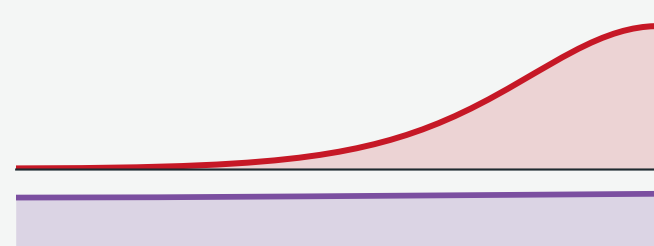

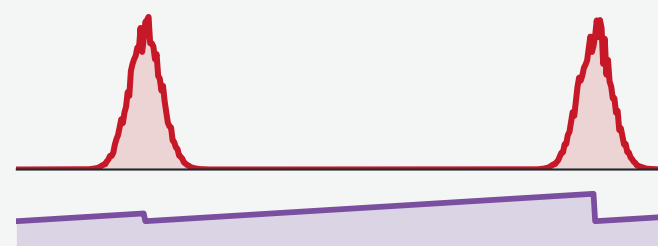

$\tau = 10^3$, $D_{sd} = 15/1$

$t = 100$: **transient response**

$t = 1000$: **evolving source density**

selection

ρ evolves

Actual TRBDF2 solver output; static and dynamic cases use the same initial wounds.
